

Abstract

1  
2 A circuit board holder has or is provided with a face plate  
3 and with walls projecting from an inside of that face plate. A  
4 pair of opposite ones of such walls are equipped with circuit board  
5 retainers. Such retainers may be inside and/or outside of a space  
6 in the circuit board holder. The circuit board holder is equipped  
7 with one or more holder retainers or resilient snaps for releasably  
8 retaining that circuit board holder in an aperture of a panel.  
9 Such holder retainers or resilient snaps may have serrations for  
10 engaging panels of different thicknesses at their apertures. Such  
11 panel may be provided with a slot or slots at that aperture for  
12 access to the holder retainer or resilient snaps through the panel.  
13 The holder retainer or resilient snap may be released through such  
14 slots, such as by screwdrivers or other release tool, for removal  
15 of the circuit board holder or similar device from the panel.
